Turn**

Assignment: UI and UX Prototyping Using AI Tools

Create a user interface (UI) and user experience (UX) prototype for a mobile or web application using AI-driven design tools. This assignment aims to familiarize you with modern prototyping tools and the integration of AI in design processes.

1. Choose an Application Theme:

- Select a theme for your application (e.g., e-commerce, social media, health & fitness, educational).
- Define the primary purpose of your application.

2. Research and Planning:

- Research existing applications with similar themes.
- Identify key features and design elements that enhance user experience.
- Create a list of features and functionalities for your application.

3. Select an AI Design Tool:

- Choose an AI-driven design tool (e.g., Figma with AI plugins, Adobe XD with AI features, Sketch with AI tools, Uizard).
- Register and familiarize yourself with the chosen tool through tutorials and documentation.

4. Create Wireframes:

- Use the AI tool to create low-fidelity wireframes of your application's main screens.
- Focus on the layout and structure of each screen.

5. Design High-Fidelity Prototypes:

- Transform your wireframes into high-fidelity prototypes.
- Utilize AI features for design suggestions, color palettes, and layout adjustments.
- Ensure the design is consistent with modern UI/UX principles.

6. Add Interactivity:

- Implement interactive elements to demonstrate user flow.
- Use AI tools to simulate user interactions and gather feedback on usability.

7. Feedback and Iteration:

- Share your prototype with peers or use the AI tool's feedback features.
- Iterate on your design based on the feedback received.

8. Presentation:

- Prepare a presentation showcasing your design process, the AI tools used, and the final prototype.
- Highlight how AI assisted in the design process and improved the final outcome.

Deliverables:

Project Report:

- Description of the application theme and purpose.
- Summary of research findings and feature list.
- Documentation of the design process, including wireframes and high-fidelity prototypes.

Prototype:

- A link to the interactive prototype created using the AI tool.

Presentation:

- A slide deck summarizing the project, design process, and final prototype.
