

Hypermirror (Morikawa and Maesako, 1998)

- allows people to feel as if they are in the same virtual place even though in physically different spaces

People in different places are superimposed on the same screen to make them appear as if in same space

(woman in white sweater is in a different room to the other three)

Creating personal space in Hypermirror

2) Two in this room are invading the 'virtual' personal space of the other person by appearing to be physically on top of woman in white sweater

3) Two in the room move apart to allow person in other space more 'virtual' personal space

Everyone happy
