

Tracking devices

- Mobile apps designed to help people monitor and change their behaviour (e.g. fitness, sleeping, weight)
- Can compare with online leader boards and charts, to show how they have done in relation to their peers and friends
- Also apps that encourage reflection that in turn increase well-being and happiness

Energy reduction

(a)

(b)

Figure 5.12 (a) The Power Aware Cord consists of an electrical power strip in which the cord is designed to visualize the energy rather than hiding it. Increase and decrease in use is conveyed through showing glowing pulses, flow, and intensity of light. (b) The Watson (now a commercial product available in many countries) measures in watts or cost how much electricity someone is using in their home at any moment. This is conveyed in LEDs on the top side. On the underside are colored lights: when they glow blue it shows you are using less than normal; when it changes to purple it indicates that your usage is average; and when it is red it indicates you are using more than normal

The Tidy Street project

- large-scale visualization of the street's electricity usage
 - stenciled display on the road surface using chalk
 - provided feedback that all could see change each day
 - reduced electricity consumption by 15%

Phishing and trust

- Web used to deceive people into parting with personal details
 - e.g. Paypal, eBay and won the lottery letters
- Allows Internet fraudsters to access their bank accounts and draw money from them
- Many vulnerable people fall for it
- The art of deception is centuries old but internet allows ever more ingenious ways to trick people
