

Summary

- ❑ Data mining: Discovering interesting patterns and knowledge from massive amounts of data
- ❑ A KDD process includes data cleaning, data integration, data selection, transformation, data mining, pattern evaluation, and knowledge presentation
- ❑ Different data mining method on a wide variety of data
- ❑ Data mining functionalities: summarization, pattern discovery, classification, clustering, deep learning, outlier analysis, trend and outlier analysis, ...
- ❑ Data mining is a confluence of multiple disciplines
- ❑ Data mining has broad applications
- ❑ Promote secure data mining to benefit society
