

Summary

- ❑ Data types: nominal, binary, ordinal, interval-scaled, ratio-scaled
- ❑ Many types of data sets, e.g., numerical, text, graph, Web, image, video.
- ❑ Gain insight into the data by:
 - ❑ Basic statistical data description: central tendency, dispersion, graphical displays
 - ❑ Data visualization: map data onto graphical primitives
 - ❑ Measure data similarity
- ❑ Above steps are the beginning of data preprocessing.
- ❑ Many methods have been developed but still an active area of research.
