

Scaling FP-growth by Item-Based Data Projection

❑ What if FP-tree cannot fit in memory?—Do not construct FP-tree

❑ “Project” the database based on frequent single items

❑ Construct & mine FP-tree for each projected DB

❑ **Parallel projection** vs. **partition projection**

❑ Parallel projection: Project the DB on each frequent item

❑ Space costly, all partitions can be processed in parallel

❑ Partition projection: Partition the DB in order

❑ Passing the unprocessed parts to subsequent partitions
