

OPTICS: Finding Hierarchically Nested Clustering Structures

- ❑ OPTICS produces a special cluster-ordering of the data points with respect to its density-based clustering structure
- ❑ The cluster-ordering contains information equivalent to the density-based clusterings corresponding to a broad range of parameter settings
- ❑ Good for both automatic and interactive cluster analysis—finding intrinsic, even hierarchically nested clustering structures

OPTICS: Finding Hierarchically Nested Clustering Structures

Finding nested clustering structures with different parameter settings
