

OPTICS: Ordering Points To Identify Clustering Structure

- ❑ OPTICS (Ankerst, Breunig, Kriegel, and Sander, SIGMOD'99)
 - ❑ DBSCAN is sensitive to parameter setting
 - ❑ An extension: finding clustering structure
- ❑ Observation: Given a MinPts, density-based clusters w.r.t. a higher density are completely contained in clusters w.r.t. to a lower density
- ❑ Idea: Higher density points should be processed first—find high-density clusters first
- ❑ OPTICS stores such a clustering order using two pieces of information:
 - ❑ Core distance and reachability distance
